

SEGULA Technologies, a global engineering company, steps up its presence in Mexico

- *After experiencing strong growth in North America over the past year, global engineering group SEGULA Technologies is streamlining its structure in Mexico to support the development of its automotive, aerospace and energy activities.*
- *There are currently more than 250 vacancies in Mexico City, Monterrey, Puebla and Querétaro.*

In a context of growing demand and increasing investment in the electric vehicle market, the engineering group [SEGULA Technologies](#) is strengthening its presence in Mexico, where it has more than doubled its turnover in the last two years.

In the **automotive sector**, SEGULA Technologies plays a key role in supporting leading automotive manufacturers and OEMs in vehicle design and manufacturing engineering, especially in the current transition to electric vehicles. Current projects include electromobility initiatives such as the integration of battery packs into vehicles or the development of high-voltage systems for electric motors.

In the **aerospace** sector, SEGULA Technologies supports the automation and production ramp-up of several global aerospace companies, while in the dynamic **energy** sector, it plays a crucial role in supporting the transition to sustainable solutions such as wind and solar energy.

Fernando Gonzalez, Director of SEGULA Technologies Mexico, comments: "As we move forward, *SEGULA Technologies Mexico* strengthens its role as a trusted partner to industry leaders, offering high quality services and solutions. We are committed to preserving Mexico's manufacturing heritage by maintaining rigorous quality standards. We actively seek diverse talent, including skilled female professionals, to join our team and help expand our business. Diversity is key to our success.

SEGULA Technologies currently employs more than 600 people, mainly in Mexico City, Monterrey, Puebla and Querétaro. **To support its growth, SEGULA Mexico plans to hire more than 250 qualified engineers and technicians.** It is especially looking for engineers responsible for software and embedded systems, automation systems development, mechanical and plastics engineers, advanced manufacturing engineers, process engineers, simulation specialists and data scientists.
